1. Wash and clean the grille before applying paint and 3M double side tapes.
2. Spray few good coats of black paint on the aluminum grille insert . Any kind of spray paint you can get from the hardware store would do the job.

2. Install the brackets on the Grille first like the pictures right before installing on to the car and 3M double side tape on the bottom of the grille where it would contact the bumper.

3. Install the end of the brackets to where the car radiator's bracket at.
